

Patient Friendly Lab Report

Based on the lab report, it appears that there are some abnormalities in your blood tests. Specifically, several of your test results are outside of the normal range. Firstly, your mean corpuscular hemoglobin (MCH) and mean corpuscular volume (MCV) are both lower than normal, which may indicate a slight anemia or changes in your red blood cells. Additionally, your total RBC count is higher than normal, which could be a sign of polycythemia (an increase in the number of red blood cells). Furthermore, your blood sugar levels are higher than normal, indicating that you may have diabetes or pre-diabetes. Your serum zinc and iron levels are also lower than normal, which could be related to nutritional deficiencies or other underlying conditions. Lastly, your urinary leucocytes (pus cells) count is high, suggesting that there may be an infection or inflammation in your urinary tract. It's important to note that these results do not necessarily mean you have a specific disease or condition. Rather, they indicate that further evaluation and testing are needed to determine the underlying cause of
